

headspace Early Psychosis

Spot the signs and symptoms early and refer a young person at risk of developing psychosis

Referral criteria for an assessment with headspace Early Psychosis

- ☐ Patient is aged between 12–25
- ☐ Functional decline in the past 3 months
(For example: difficulty getting to school or work, decrease in wanting to socialise or engage in usual activities, decrease in school grades)

With any of:

- ☐ **Positive symptoms**
 - Delusional beliefs (unusual beliefs not in line with the young person or family's beliefs)
 - Hallucinations (seeing things, hearing things that others don't experience)
 - Disordered thinking or speech (difficulty constructing sentences)
 - Disorganised behaviour (behaviour that is unusual for the young person)
- ☐ **Negative symptoms**
 - Diminished emotional expression (range of emotional expression is restricted)
 - Social withdrawal (decrease in usual activities, staying home more frequently, not seeing friends)
 - Lack of motivation (lacking in energy, self esteem or confidence)
 - Cognitive decline (such as level of orientation to reality, memory changes, decrease in attention and concentration)
- ☐ **First degree relative with psychosis**
 - Schizophrenia spectrum disorders
 - Bipolar affective disorder
 - Substance / medication induced psychosis
